Technical Product Builder with hands-on experience in product analytics, user-journey analysis, experimentation, and cross-functional product execution. Identified platform-specific drop-offs and friction points across user funnels, contributing to an estimated 25–30 % reduction in user drop-offs. Independently built and launched StreakUp, a React-based habit-tracking product, taking it from concept to an initial release with 4–5 early users.

EDUCATION

BE in Computer Science Engineering (Honours) **Dec 2021-May 2025**
Mangalore Institute of Technology and Engineering CGPA: 8.12

EXPERIENCE

Apprentice - Fyers Securities Pvt. Ltd **July 2025 - Dec 2025**

- Analyzed user behavior across signup, onboarding, and trading journeys using Google Analytics, CleverTap, and AppsFlyer, identifying platform-specific friction points and contributing to an estimated 25–30% reduction in user drop-offs
- Collaborated with Product, Design, and Engineering teams to optimize the signup experience and implement analytics capabilities across web and iOS, reducing signup friction from approximately 40–45% to 20–25 % and improving visibility into user behavior.

Developer Intern - Zidio Developments Pvt. Ltd **Feb 2025 - May 2025**

- Defined product workflows and structured features for a task-management platform, improving task visibility and reducing friction for users managing cross-team work
- Collaborated with cross-functional teammates to develop real-time communication features, translating product requirements into functional improvements focused on usability and team efficiency.

PROJECT

StreakUp & Habit Tracking Web Application

- Independently conceptualised and built StreakUp, a React-based habit-tracking web application, translating a user problem into a functional product with interactive habit management and progress-tracking workflows.
- Launched the initial version and onboarded 4–5 early users, gathering initial usage feedback while continuing to iterate and scale the product.

Enhancing Communication and Pain Detection for Individuals with Cerebral Palsy

- Developed an AI/ML-based speech clarity solution using MFCC for speech feature extraction and KNN for classification, integrating the machine learning workflow with an Android application to support accessible communication.
- Translated accessibility challenges into application workflows and delivered a technical presentation explaining the problem, ML methodology, system architecture, and solution to faculty and peers.

SKILLS

Technical Skills	Python, JavaScript, Go, SQL, React, Flutter, Flask, PostgreSQL, MySQL
Core Product Skills	Product Lifecycle Management, Feature Prioritisation, Agile, Scrum, Cross-functional Collaboration, Stakeholder Communication
Product Analytics / Metrics	Google Analytics, CleverTap, AppsFlyer, KPI Tracking, Funnel Analysis, User Journey Analysis, User Behaviour Analysis, Conversion, Retention & Engagement Metrics, A/B Testing Fundamentals
Tools	Git, Notion, Figma, Postman, AWS, Salesforce, Excel, Google Workspace
